

# Human Milk Storage & Handling

## Milk Storage Guidelines

Location	Temperature	Duration	Comments
Countertop	Room Temp (up to 77° F)	6-8 hours	Containers should be covered and kept cool. Cover with a cool towel to help keep it cool.
Insulated Cooler Bag	5° F - 39° F	24 hours	Keep ice packs in cooler and next to milk containers. Limit the number of times you open the cooler.
Refrigerator	39° F	5 days	Store milk in the back of the refrigerator.
Freezer compartment inside refrigerator	5° F	2 weeks	Store milk in back of the freezer where it is coolest. Frozen milk stored for longer times is safe, but may not be as nutritious.
Refrigerator/freezer combo with separate doors	0° F	3-6 months	

## Guidelines for Correctional Facilities

- Human milk is not considered a bio-hazard material.
- It is not necessary to wear gloves when handling breastmilk.
- Inmate mothers should wash their hands prior to milk expression.
- If human milk is spilled, clean up with soap and water like any other food product.
- When the milk is placed in or taken from the freezer/refrigerator, check that each bag is labeled with today's date, inmate's name and date milk was expressed.
- Labels should be written with a permanent marker.
- If the bag of human milk is compromised (seal is broken, bag has a hole in it, etc.), dispose of the bag and document the disposal of the bag with a brief explanation of the incident.

# How to Keep Your Breast Pump Kit Clean

## Before Use

Wash your hands before using your pump, and use disinfectant wipes to clean the outside of your pump.

## After Use

After every use, take apart the pump parts and rinse them under running water. Don't put them directly in the sink!

Clean your pump parts as soon as possible with hot, soapy water in a wash basin and brush used only for cleaning pump parts, or in the dishwasher.

Rinse in fresh water (don't put them back in the same basin).

Air dry on a clean dish towel, but don't rub the parts with the towel as this could spread germs.

Rinse your basin and brush, and leave them to air dry. Clean them as well at least every few days.

If you're using the dishwasher, place on a hot water and heated drying cycle, or a sanitize cycle. Wash your hands before taking out the parts, and allow them to air dry.

Store items in a clean, protected area only after they're completely dry.
